MASTER OF COMPUTER APPLICATIONS

Course Code	MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE	L	T	P	C
		23MCA101	4	0	0
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> Introduces the elementary discrete mathematics for computer science and engineering. Topics include formal logic notation, methods of proof, induction, sets, relations, graph theory, permutations and combinations, counting principles; recurrence relations and generating functions 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Demonstrate the ability to understand and construct precise mathematical proofs Demonstrate the ability to use logic and set theory to formulate precise statements Acquire the knowledge to analyse and solve counting problems on finite and discrete structures Demonstrate the ability to describe and manipulate sequences Demonstrate the ability to apply graph theory in solving computing problems 					
UNIT – I		Lecture Hrs:			
The Foundations Logic and Proofs: Propositional Logic, Applications of Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Proof Methods and Strategy.					
UNIT – II		Lecture Hrs:			
Basic Structures, Sets, Functions, Sequences, Sums, Matrices and Relations: Sets, Functions, Sequences & Summations, Cardinality of Sets and Matrices Relations, Relations and Their Properties, n-ary Relations and Their Applications, Representing Relations, Closures of Relations, Equivalence Relations, Partial Orderings					
UNIT - III		Lecture Hrs:			
Algorithms, Induction and Recursion: Algorithms, The Growth of Functions, Complexity of Algorithms. Induction and Recursion: Mathematical Induction, Strong Induction and Well-Ordering, Recursive Definitions and Structural Induction, Recursive Algorithms, Program Correctness					
UNIT – IV		Lecture Hrs:			
Discrete Probability and Advanced Counting Techniques: An Introduction to Discrete Probability, Probability Theory, Bayes' Theorem, Expected Value and Variance. Advanced Counting Techniques: Recurrence Relations, Solving Linear Recurrence Relations, Divide-and-Conquer Algorithms and Recurrence Relations, Generating Functions, Inclusion-Exclusion, Applications of Inclusion-Exclusion.					
UNIT – V		Lecture Hrs:			
Graphs: Graphs and Graph Models, Graph Terminology and Special Types of Graphs, Representing Graphs and Graph Isomorphism, Connectivity, Euler and Hamilton Paths, Shortest-Path Problems, Planar Graphs, Graph Coloring.					
TEXTBOOKS					
1. Discrete Mathematics and Its Applications with Combinatorics and Graph Theory- Kenneth H Rosen, 7 thEdition, TMH.					
REFERENCES

MASTER OF COMPUTER APPLICATIONS

Course Code	SOFTWARE ENGINEERING	L	T	P	C
		4	0	0	4
		Semester I			
Course Objectives:					
<ul style="list-style-type: none"> • To learn the basic concepts of software engineering and life cycle models • To explore the issues in software requirements specification and enable to write SRS documents for software development problems • To elucidate the basic concepts of software design and enable to carry out procedural and object oriented design of software development problems • To understand the basic concepts of black box and white box software testing and enable to design test cases for unit, integration, and system testing. • To reveal the basic concepts in software project management 					
Course Outcomes (CO): Student will be able to					
<ol style="list-style-type: none"> 1. Introduce SE and Models 2. Discuss Techniques on SPM, Requirements analysis and Specification 3. Highlights some important facets of Software Design 4. Testing Techniques and Quality Control Activities. 5. Discusses on Software Quality Assurance and Trends 					
UNIT – I		Lecture Hrs:			
Introduction: Evolution, Software Development Projects, Exploratory style of Software Development, Emergence, Notable Changes in Software Development Practices, Computer Systems Engineering Software Life Cycle Models: A few basic concepts, Waterfall Model and its extensions, RAD, Agile Development Models, Spiral Model, Comparison.					
UNIT – II		Lecture Hrs:			
Software Project Management: SPM complexities, Responsibility of a software Development Manager, Project Planning, Metrics for Project Size Estimation, Project Estimation Techniques, COCOMO, Halstead's Software Science, Scheduling, Organization and Team Structures, Risk Management, Software Configuration Management. Requirements Gathering and Analysis, SRS, Overview of Formal System development techniques. Axiomatic Specification, Algebraic Specification.					
UNIT - III		Lecture Hrs:			
Software Design: Overview of the Design Process, Characterize good design, Cohesion and Coupling, Layered Arrangement of Modules, Approaches to Software Design. Function-oriented Software Design: Overview, Structured Analysis, Developing the DFD model of a system, Structured Design, Detailed Design and Review. User Interface Design: Characteristics, Basic Concepts, Types, Fundamentals of Component-based GUI Development, GUI Design Methodology.					
UNIT – IV		Lecture Hrs:			
Object Modeling Using UML: Unified Modeling Language (UML), UML Diagrams, Use Case Model, Class Diagrams, Interaction Diagrams, Activity Diagram, State Chart Diagram, Package, Component, and Deployment Diagrams. Coding and Testing: Coding, Code Review, Software Documentation, Testing, Unit Testing, Black-Box Testing, White-box Testing, Debugging, Program Analysis Tools, Integration Testing, Testing Object-oriented Programs.					
UNIT – V		Lecture Hrs:			
Software Reliability and Quality Management: Software Reliability, Statistical Testing, Software Quality, Software Quality Management System, ISO 9000, SEI Capability Maturity Model, Other Important Standards, Six Sigma Emerging Trends: Client-Server Software, Architectures, CORBA, COM, DCOM, SOA, SAAS					
Text Books:

MASTER OF COMPUTER APPLICATIONS

Course Code	COMPUTER ORGANIZATION & ARCHITECTURE	L	T	P	C
23MCA103		4	0	0	4
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> Learn the fundamentals of computer organization and its relevance to classical and modern problems of computer design Understand the structure and behavior of various functional modules of a computer. Discuss the techniques that computers use to communicate with I/O devices Study the concepts of pipelining and the way it can speed up processing. Describe the basic characteristics of multiprocessors 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Demonstrate computer architecture concepts related to design of modern processors, memories and I/Os Able to explore the hardware requirements for cache memory and virtual memory Ability to design algorithms to exploit pipelining and multiprocessors Ability to use memory and I/O devices effectively Detect pipeline hazards and identify possible solutions to those hazards 					
UNIT – I		Lecture Hrs:			
Basic Structure of Computer: Computer Types, Functional Units, Basic operational Concepts, Bus Structure, Software, Performance, Multiprocessors and Multicomputer. Machine Instructions and Programs: Numbers, Arithmetic Operations and Programs, Instructions and Instruction Sequencing, Addressing Modes, Basic Input/output Operations INTEL-8086: CPU architecture, Addressing modes - generation of physical address- code segment registers, Zero, one, two, and three address instructions. INTEL 8086 ASSEMBLY LANGUAGE INSTRUCTIONS-Data transfer instructions, input- output instructions, arithmetic, logical, shift, and rotate instructions, Conditional and unconditional transfer.					
UNIT – II		Lecture Hrs:			
Arithmetic: Addition and Subtraction of Signed Numbers, Design of Fast Adders, Multiplication of Positive Numbers, Signed-operand Multiplication, Fast Multiplication, Integer Division, Floating- Point Numbers and Operations. Basic Processing Unit: Fundamental Concepts, Execution of a Complete Instruction, Multiple-Bus Organization, Hardwired Control, Multi-programmed Control.					
UNIT - III		Lecture Hrs:			
The Memory System: Basic Concepts, Semiconductor RAM Memories, Read-Only Memories, Speed, Size and Cost, Cache Memories, Performance Considerations, Virtual Memories, Memory Management Requirements, Secondary Storage.					
UNIT – IV		Lecture Hrs:			
Input/output Organization: Accessing I/O Devices, Interrupts, Processor Examples, Direct Memory Access, Buses, Interface Circuits, Standard I/O Interfaces.					
UNIT – V		Lecture Hrs:			
Pipelining: Basic Concepts, Data Hazards, Instruction Hazards, Influence on Instruction Sets. Large Computer Systems: Forms of Parallel Processing, Array Processors, The Structure of General-Purpose multiprocessors, Interconnection Networks.					
TEXT BOOKS:					
1. Computer Organization, Carl Hamacher, Zvonko Vranesic, Safwat Zaky, McGraw Hill Education, 5th Edition, 2013. 2. Microprocessors and Interfacing, Douglas Hall, Tata McGraw-Hill.

MASTER OF COMPUTER APPLICATIONS

Course Code	DATA STRUCTURES	L	T	P	C
		23MCA104	4	0	0
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> To illustrate the basic concepts of C programming language. To discuss the concepts of Functions, Arrays, Pointers and Structures. To familiarize with Stack, Queue and Linked lists data structures. To explain the concepts of non-linear data structures like graphs and trees. To learn the different types of searching and sorting techniques. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Use C basic concepts to write simple C programs Explain the different notations of arithmetic express Analyze various operations on linked list Develop the representation of Tress Design the different sorting technique 					
UNIT – I		Lecture Hrs:			
Introduction to C Language - C Language Elements, Variable Declarations and Data Types, Operators and Expressions, Decision Statements - If and Switch Statements, Loop Control Statements -while, for, do-while Statements. Introduction to Functions, Storage classes, Arrays, Structures, Unions, Pointers, Strings and Command line arguments.					
UNIT – II		Lecture Hrs:			
Data Structures, Stacks and Queues- Overview of Data Structure, Representation of a Stack, Stack Related Terms, Operations on a Stack, Implementation of a Stack, Evaluation of Arithmetic Expressions, Infix, Prefix, and Postfix Notations, Evaluation of Postfix Expression, Conversion of Expression from Infix to Postfix, Recursion, Queues - Various Positions of Queue, Representation of Queue, Insertion, Deletion, Searching Operations.					
UNIT - III		Lecture Hrs:			
Linked Lists–Pointers, Singly Linked List, Dynamically Linked Stacks and Queues, Polynomials Using Singly Linked Lists, Using Circularly Linked Lists, Insertion, Deletion and Searching Operations, Doubly linked lists and its operations, Circular linked lists and its operations.					
UNIT – IV		Lecture Hrs:			
Trees- Tree terminology, representation, Binary tress, representation, Binary tree traversals. Binary Tree Operations, Graphs- Graph terminology, Graph representation, Elementary Graph Operations, Breadth first search (BFS) and Depth first search (DFS), Connected Components, Spanning Trees.					
UNIT – V		Lecture Hrs:			
Searching and Sorting–Sequential, Binary, Exchange (Bubble) Sort, Selection Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort. Searching- Linear and Binary Search Methods.					
Text Books:					
<ol style="list-style-type: none"> The C Programming Language, Brian W Kernighan and Dennis M Ritchie, Second Edition, Prentice Hall Publication. Fundamentals of Data Structures in C, Ellis Horowitz, SartajSahni, Susan Anderson-Freed, Computer Science Press. Programming in C and Data Structures, J.R.Hanly, Ashok N. Kamthane and A. AnandaRao, Pearson Education. B.A.Forouzon and R.F. Gilberg, “COMPUTER SCIENCE: A Structured Programming Approach Using C”, Third edition, CENGAGE Learning, 2016. Richard F. Gilberg&Behrouz A. Forouzan, “Data Structures: A Pseudocode Approach with C”, Second Edition, CENGAGE Learning, 2011.

MASTER OF COMPUTER APPLICATIONS

Course Code	DATABASE MANAGEMENT SYSTEMS	L	T	P	C
		23MCA105	4	0	0
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> • Train in the fundamental concepts of database management systems, database modeling and design, SQL, PL/SQL and system implementation techniques. • Enable students to model ER diagram for any customized application • Inducting appropriate strategies for optimization of queries. • Provide knowledge on concurrency techniques • Demonstrate the organization of Databases 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Design a database for a real world information system • Define transactions which preserve the integrity of the database • Generate tables for a database • Organize the data to prevent redundancy • Pose queries to retrieve the information from database 					
UNIT – I		Lecture Hrs:			
Introduction: Database systems applications, Purpose of Database Systems, view of Data, Database Languages, Database Design, Database Engine, Database and Application Architecture, Database Users and Administrators. Introduction to Relational Model: Structure of Relational Databases, Database Schema, Keys, Schema Diagrams, Relational Query Languages, Relational Algebra					
UNIT – II		Lecture Hrs:			
Introduction to SQL: Overview of the SQL Query Language, SQL Data Definition, Basic Structure of SQL Queries, Additional Basic Operations, Set Operations, Null Values, Aggregate Functions, Nested Sub-queries, Modification of the Database. Intermediate SQL: Joint Expressions, Views, Transactions, Integrity Constraints, SQL Data Types and Schemas, Index Definition in SQL, Authorization. Advanced SQL: Accessing SQL from a Programming Language, Functions and Procedures, Triggers, Recursive Queries, Advanced Aggregation Features.					
UNIT – III		Lecture Hrs:			
Database Design and the E-R Model: Overview of the Design Process, The Entity-Relationship Model, Complex Attributes, Mapping Cardinalities, Primary Key, Removing Redundant Attributes in Entity Sets, Reducing E-R Diagrams to Relational Schemas, Extended E-R Features, Entity- Relationship Design Issues, Alternative Notations for Modelling Data, Other Aspects of Database Design. Relational Database Design: Features of Good Relational Designs, Decomposition Using Functional Dependencies, Normal Forms, Functional-Dependency Theory, Algorithms for Decomposition using Functional Dependencies, Decomposition Using Multivalued Dependencies, More Normal Forms, Atomic Domains and First Normal Form, Database–Design Process, Modelling Temporal Data, Indexing.					
UNIT – IV		Lecture Hrs:			
Query Processing: Overview, Measures of Query cost, Selection Operation, Sorting, Join Operation, Other Operations, Evaluation of Expressions, Query Processing in Memory. Query optimization: Overview, Transformation of Relational Expressions, Estimating Statistics of Expression Results, Choice of Evaluation Plans, Materialized views, Advanced Topics in Query Optimization.					
UNIT – V		Lecture Hrs:			
Transaction Management: Transactions: Transaction Concept, A Simple Transactional Model, Storage Structure, Transaction Atomicity and Durability, Transaction Isolation, Serializability, Transaction Isolation and Atomicity,					

**ANNAMACHARYA INSTITUTE OF TECHNOLOGY & SCIENCES: KADAPA
(AUTONOMOUS)**

(Approved by AICTE New Delhi & Affiliated to JNTUA, Ananthapuramu)
Accredited by NAAC with 'A' grade, Bangalore

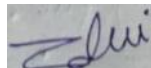

MASTER OF COMPUTER APPLICATIONS

Transaction Isolation Levels, Implementation of Isolation Levels, Transactions as SQL Statements. Concurrency Control: Lock-Based Protocols, Deadlock Handling, Multiple Granularity, Insert Operations. Delete Operations and Predicate Reads, Timestamp-Based Protocols, Validation- Based Protocols, Multiversion Schemes, Snapshot Isolation, Weak Levels of Consistency in Practice, Advanced Topics in Concurrency.

Recovery System: Failure Classification, Storage, Recovery and Atomicity, Recovery Algorithm, Buffer Management, Failure with Loss of Non-Volatile Storage, High Availability Using Remote Backup Systems, Early Lock Release and Logical Undo Operations, ARIES, Recovery in Main- Memory Databases.

MASTER OF COMPUTER APPLICATIONS

- i) Arrays
- ii) Pointers

Write C programs that implement Queue (its operations) using

- i) Arrays
- ii) Pointers

Write a C program that uses Stack operations to perform the following:

- i) Converting infix expression into postfix expression
- ii) Evaluating the postfix expression

Write a C program that uses functions to perform the following operations on singly linked list.

- i) Creation ii) Insertion iii) Deletion iv) Traversal

Write a C program that uses functions to perform the following operations on Doubly linkedlist.

- i) Creation ii) Insertion iii) Deletion iv) Traversal

Write a C program that uses functions to perform the following operations on Circular linkedlist.

- i) Creation ii) Insertion iii) Deletion iv) Traversal

Write a C program that uses functions to perform the following:

- i) Creating a Binary Tree of integers
- ii) Traversing the above binary tree in preorder, inorder and postorder.

Write C programs that use both recursive and non-recursive functions to perform the following searching operations for a Key value in a given list of integers:

- i) Linear search
- ii) Binary search

Write a C program that implements the following sorting methods to sort a given list of integers in ascending order

- i) Bubble sort
- ii) Selection sort

Write a C program that implements the following sorting methods to sort a given list of integers in ascending order

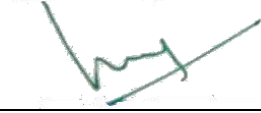

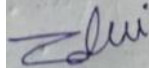

- i) Insertion sort
- ii) Merge sort
- iii) Quick sort

Course Code	DATABASE MANAGEMENT SYSTEMS	L	T	P	C												
23MCA108	LABORATORY	0	1	2	2												
Semester		I															
Course Objectives:																	
<ul style="list-style-type: none"> • To implement the basic knowledge of SQL queries and relational algebra. • To construct database models for different database applications. • To apply normalization techniques for refining of databases. • To practice various triggers, procedures, and cursors using PL/SQL. • To design and implementation of a database for an organization 																	
Course Outcomes (CO):																	
<ul style="list-style-type: none"> • Design database for any real world problem • Implement PL/SQL programs • Define SQL queries • Decide the constraints • Investigate for data inconsistency 																	
List of Experiments:																	
1. Create a table called Employee with the following structure.																	
		<table border="1"> <thead> <tr> <th>Name</th> <th>Type</th> </tr> </thead> <tbody> <tr> <td>Empno</td> <td>Number</td> </tr> <tr> <td>Ename</td> <td>Varchar2(20)</td> </tr> <tr> <td>Job</td> <td>Varchar2(20)</td> </tr> <tr> <td>Mgr</td> <td>Number</td> </tr> <tr> <td>Sal</td> <td>Number</td> </tr> </tbody> </table>				Name	Type	Empno	Number	Ename	Varchar2(20)	Job	Varchar2(20)	Mgr	Number	Sal	Number
Name	Type																
Empno	Number																
Ename	Varchar2(20)																
Job	Varchar2(20)																
Mgr	Number																
Sal	Number																
<ol style="list-style-type: none"> a. Add a column commission with domain to the Employee table. b. Insert any five records into the table. c. Update the column details of job d. Rename the column of Employ table using alter command. e. Delete the employee whose empno is 19. 																	
1. Createdepartmenttablewiththefollowingstructure.																	
		<table border="1"> <thead> <tr> <th>Name</th> <th>Type</th> </tr> </thead> <tbody> <tr> <td>Deptno</td> <td>Number</td> </tr> </tbody> </table>				Name	Type	Deptno	Number								
Name	Type																
Deptno	Number																

ANNAMACHARYA INSTITUTE OF TECHNOLOGY & SCIENCES: KADAPA (AUTONOMOUS)

(Approved by AICTE New Delhi & Affiliated to JNTUA, Ananthapuramu)
Accredited by NAAC with 'A' grade, Bangalore

MASTER OF COMPUTER APPLICATIONS

	Deptname	Varchar2(20)
	Location	Varchar2(20)

a. Add column designation to the department table.
b. Insert values into the table.
c. List the records of emp table grouped by dept no.
d. Update the record where dept no is9.
e. Delete any column data from the table

QUERIES USING DDL AND DML

1.
 - a. Create a user and grant all permissions to the user.
 - b. Insert the any three records in the employee table and use rollback. Check the result.
 - c. Add primary key constraint and not null constraint to the employee table.
 - d. Insert null values to the employee table and verify the result.
2.
 - a. Create a user and grant all permissions to the user.
 - b. Insert values in the department table and use commit.
 - c. Add constraints like unique and not null to the department table.
 - d. Insert repeated values and null values into the table.
3.
 - a. Create a user and grant all permissions to the user.
 - b. Insert values into the table and use commit.
 - c. Delete any three records in the department table and use rollback.
 - d. Add constraint primary key and foreign key to the table.
4.
 - a. Create a user and grant all permissions to the user.
 - b. Insert records in the sailor table and use commit.
 - c. Add save point after insertion of records and verify save point.
 - d. Add constraints not null and primary key to the sailor table.
5.
 - a. Create a user and grant all permissions to the user.
 - b. Use revoke command to remove user permissions.
 - c. Change password of the user created.
 - d. Add constraint foreign key and notnull.
6.
 - a. Create a user and grant all permissions to the user.
 - b. Update the table reserves and use save point and rollback.
 - c. Add constraint primary key , foreign key and not null to the reserves table
 - d. Delete constraint not null to the table column.

QUERIES USING AGGREGATE FUNCTIONS

1.
 - a. By using the group by clause, display the names who belongs to dept no 10 along with average salary.
 - b. Display lowest paid employee details under each department.
 - c. Display number of employees working in each department and their department number.
 - d. Using built in functions, display number of employees working in each department and their department name from dept table. Insert dept name to dept table and insert dept name for each row, do the required thing specified above.
 - e. List all employees which start with either B or C.
 - f. Display only these ename of employees where the maximum salary is greater than or equal to 5000.
2.
 - a. Calculate the average salary for each different job.
 - b. Show the average salary of each job excluding manager.
 - c. Show the average salary for all departments employing more than three people.
 - d. Display employees who earn more than thelowest salary in department 30
 - e. Show that value returned by sign (n)function.

ANNAMACHARYA INSTITUTE OF TECHNOLOGY & SCIENCES: KADAPA (AUTONOMOUS)

(Approved by AICTE New Delhi & Affiliated to JNTUA, Ananthapuramu)
Accredited by NAAC with 'A' grade, Bangalore

MASTER OF COMPUTER APPLICATIONS

- f. How many days between day of birth to current date
3. a. Show that two substrings as single string.
- b. List all employee names, salary and 15% rise in salary.
- c. Display lowest paid emp details under each manager
- d. Display the average monthly salary bill for each deptno.
- e. Show the average salary for all departments employing more than two people.
- f. By using the group by clause, display the eid who belongs to dept no 05 along with average salary.
4. a. Count the number of employees in department20
- b. Find the minimum salary earned by clerk.
- c. Find minimum, maximum, average salary of all employees.
- d. List the minimum and maximum salaries for each job type.
- e. List the employee names in descending order.
- f. List the employee id, names in ascending order by empid.
5. a. Find the sids ,names of sailors who have reserved all boats called "INTERLAKE
Find the age of youngest sailor who is eligible to vote for each rating level with at least two such sailors.
- b. Find the sname , bid and reservation date for each reservation.
- c. Find the ages of sailors whose name begin and end with B and has at least 3characters.
- d. List in alphabetic order all sailors who have reserved red boat.
- e. Find the age of youngest sailor for each rating level.
6. a. List the Vendors who have delivered products within 6 months.
- b. Display the Vendor details who have supplied both Assembled and Subparts.
- c. Display the Sub parts by grouping the Vendor type (Local or Non Local).

PROGRAMS ON PL/SQL

1. a. Write a PL/SQL program to swaptwonumbers.
- b. Write a PL/SQL program to find the largest of three numbers.
2. a. Write a PL/SQL program to find the total and average of 6 subjects and display the grade.
- b. Write a PL/SQL program to find the sum of digits in a given number.
3. a. Write a PL/SQL program to display the number in reverse order.
- b. Write a PL/SQL program to check whether the given number is prime or not.
4. a. Write a PL/SQL program to find the factorial of a given number.
- b. Write a PL/SQL code block to calculate the area of a circle for a value of radius varying from 3 to 7. Store the radius and the corresponding values of calculated area in an empty table named areas, consisting of two columns radius and area.
5. a. Write a PL/SQL program to accept a string and remove the vowels from the string. (When 'hello' passed to the program it should display 'Hll' removing e and o from the worldHello).
- b. Write a PL/SQL program to accept a number and a divisor. Make sure the divisor is less than or equal to 10. Else display an error message. Otherwise Display the remainder in words.

PROCEDURES AND FUNCTIONS

1. Write a function to accept employee number as parameter and return Basic +HRA together as single column.
2. Accept year as parameter and write a Function to return the total net salary spent for a given year.
3. Create a function to find the factorial of a given number and hence find NCR.
4. Write a PL/SQL block to print prime Fibonacci series using local functions.
5. Create a procedure to find the lucky number of a given birth date.
6. Create function to the reverse of given number

ANNAMACHARYA INSTITUTE OF TECHNOLOGY & SCIENCES: KADAPA (AUTONOMOUS)

(Approved by AICTE New Delhi & Affiliated to JNTUA, Ananthapuramu)
Accredited by NAAC with 'A' grade, Bangalore

MASTER OF COMPUTER APPLICATIONS

PROCEDURES

1. Create the procedure for palindrome of given number.
2. Create the procedure for GCD: Program should load two registers with two Numbers and then apply the logic for GCD of two numbers. GCD of two numbers is performed by dividing the greater number by the smaller number till the remainder is zero. If it is zero, the divisor is the GCD if not the remainder and the divisors of the previous division are the new set of two numbers. The process is repeated by dividing greater of the two numbers by the smaller number till the remainder is zero and GCD is found.
3. Write the PL/SQL programs to create the procedure for factorial of given number.
4. Write the PL/SQL programs to create the procedure to find sum of N natural number.
5. Write the PL/SQL programs to create the procedure to find Fibonacci series.
6. Write the PL/SQL programs to create the procedure to check the given number is perfect or not.

CASE STUDY: BOOK PUBLISHING COMPANY

A publishing company produces scientific books on various subjects. The books are written by authors who specialize in one particular subject. The company employs editors who, not necessarily being specialists in a particular area, each take sole responsibility for editing one or more publications.

A publication covers essentially one of the specialist subjects and is normally written by a single author. When writing a particular book, each author works with one editor, but may submit another work for publication to be supervised by other editors. To improve their competitiveness, the company tries to employ a variety of authors, more than one author being a specialist in a particular subject for the above case study, do the following:

1. Analyze the data required.
 2. Normalize the attributes.
- Create the logical data model using E-R diagrams

CASE STUDY: STUDENT PROGRESS MONITORING SYSTEM

A database is to be designed for a college to monitor students' progress throughout their course of study. The students are reading for a degree (such as BA, BA (Hons) M.Sc., etc) within the framework of the modular system. The college provides a number of modules, each being characterized by its code, title, credit value, module leader, teaching staff and the department they come from. A module is coordinated by a module leader who shares teaching duties with one or more lecturers. A lecturer may teach (and be a module leader for) more than one module. Students are free to choose any module they wish but the following rules must be observed: Some modules require pre-requisites modules and some degree programmes have compulsory modules. The database is also to contain some information about students including their numbers, names, addresses, degree they read for, and their past performance i.e. modules taken and examination results. For the above case study, do the following:

1. Analyze the data required.
2. Normalize the attributes.
3. Create the logical data model i.e., ER diagrams.
4. Comprehend the data given in the case study by creating respective tables with primary keys and foreign keys wherever required.
5. Insert values into the tables created (Be vigilant about Master-Slave tables).
6. Display the Students who have taken M.Sc course
7. Display the Module code and Number of Modules taught by each Lecturer.
8. Retrieve the Lecturer names who are not Module Leaders.
9. Display the Department name which offers 'English' module.

Course Code	RESEARCH METHODOLOGY AND IPR	L	T	P	C
23MCA109		2	0	0	2
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> Identify an appropriate research problem in their interesting domain. Understand ethical issues understand the Preparation of a research project thesis report. Understand the Preparation of a research project thesis report Understand the law of patent and copyrights. Understand the Adequate knowledge on IPR 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Analyze research related information Follow research ethics Understand that today's world is controlled by Computer, Information Technology, but tomorrow w world will be ruled by ideas, concept, and creativity. Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits. 					
UNIT - I		Lecture Hrs:			
Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, scope, and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations					
UNIT - II		Lecture Hrs:			
Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.					
UNIT - III		Lecture Hrs:			
Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.					
UNIT - IV		Lecture Hrs:			
Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.					
UNIT - V		Lecture Hrs:			
New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.					
Text Books:

Course Code	OPERATING SYSTEMS	L	T	P	C
		23MCA201	4	0	0
Semester		II			
Course Objectives:					
<ul style="list-style-type: none"> • Understand basic concepts and functions of operating systems • Understand the processes, threads and scheduling algorithms. • Provide good insight on various memory management techniques • Expose the students with different techniques of handling deadlocks • Explore the concept of file-system and its implementation issues • Familiarize with the basics of Linux operating system • Implement various schemes for achieving system protection and security 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Realize how applications interact with the operating system • Analyze the functioning of a kernel in an Operating system. • Summarize resource management in operating systems • Analyze various scheduling algorithms • Examine concurrency mechanism in Operating Systems 					
UNIT - I		Lecture Hrs:			
Operating Systems Overview: Introduction, Operating system functions, Operating systems operations, Computing environments, Open-Source Operating Systems System Structures: Operating System Services, User and Operating-System Interface, systems calls, Types of System Calls, system programs, Operating system Design and Implementation, Operating System structure, Operating system debugging, System Boot.					
UNIT - II		Lecture Hrs:			
Process Scheduling: Basic concepts, Scheduling criteria, Scheduling algorithms, Multiple processor scheduling, Thread scheduling, Examples. Multithreaded Programming: Multithreading models, Thread libraries, Threading issues, Examples. Inter-process Communication: Race conditions, Critical Regions, Mutual exclusion with busy waiting, Sleep and wakeup, Semaphores, Mutexes, Monitors, Message passing, Dining philosophers problem, Readers and writers problem.					
UNIT - III		Lecture Hrs:			
Memory-Management Strategies: Introduction, Swapping, Contiguous memory allocation, Paging, Segmentation, Examples. Virtual Memory Management: Introduction, Demand paging, Copy on-write, Page replacement, Frame allocation, Thrashing, Memory-mapped files, Kernel memory allocation, Examples.					
UNIT - IV		Lecture Hrs:			
Deadlocks: Resources, Conditions for resource deadlocks, Ostrich algorithm, Deadlock detection And recovery, Deadlock avoidance, Deadlock prevention. File Systems: Files, Directories, File system implementation, management and optimization. Secondary-Storage Structure: Overview of disk structure, and attachment, Disk scheduling, RAID structure.					
UNIT - V		Lecture Hrs:			
System Protection: Goals of protection, Principles and domain of protection, Access matrix, Access control, Revocation of access rights. System Security: Introduction, Program threats, System and network threats, Cryptography as a security, User authentication, implementing security defenses, firewalling to protect systems and networks,

Course Code	DATA SCIENCE WITH PYTHON	L	T	P	C
		4	0	0	4
Semester		II			
Course Objectives:					
<ul style="list-style-type: none"> To study fundamental concepts in software testing To discuss various software testing issues and solutions in software unit test, integration and system testing. To expose the advanced software testing topics, such as object-oriented software testing methods. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> List a range of different software testing techniques and strategies and be able to apply specific (automated) unit testing method to the projects. Distinguish characteristics of structural testing methods. Demonstrate the integration testing which aims to uncover interaction and compatibility problems as early as possible. Discuss about the functional and system testing methods. 					
UNIT – I	Introduction: Objective, scope and outcome of the course	Lecture Hrs:			
Toolboxes: Python, fundamental libraries for data Scientists. Integrated development environment (IDE). Data operations: Reading, selecting, filtering, manipulating, sorting, grouping, rearranging. Ranking, and plotting.					
UNIT - II	Data preparation	Lecture Hrs:			
Descriptive statistics, data preparation. Exploratory Data Analysis data summarization, data distribution, measuring asymmetry. Sample and estimated mean, variance and standard score. Statistical Inference frequency approach, variability of estimates, hypothesis testing using confidence intervals, using p-values.					
UNIT - III	Supervised and Unsupervised learning	Lecture Hrs:			
Patterns, features, patter representation, dimensionality reduction. Supervised and Unsupervised learning. Classification—linear and non-linear. Bayesian, K-Nearest neighbor classifier, Support vector machine, use of kernels, Logistic regression, Naïve-bayes, decision trees and random forests; boosting and bagging. Clustering---partitional and hierarchical; k-means clustering. Regression. Least squares.					
UNIT - IV	Regression	Lecture Hrs:

Course Code	SOFTWARE TESTING METHODOLOGIES	L	T	P	C
23MCA204a		4	0	0	3
Semester		II			
Course Objectives:					
<ul style="list-style-type: none"> To provide knowledge of the concepts in software testing such as testing process, criteria, strategies, and methodologies. To develop skills in software test automation and management using latest tools. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Have an ability to apply software testing knowledge and engineering methods. Have an ability to design and conduct a software test process for a software testing project. Have an ability to identify the needs of software test automation, and define and develop a test tool to support test automation. Have an ability understand and identify various software testing problems, and solve these problems by designing and selecting software test models, criteria, strategies, and methods. Have an ability to use various communication methods and skills to communicate with their teammates to conduct their practice-oriented software testing projects 					
UNIT - I		Lecture Hrs:			
Introduction: Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs Flow graphs and Path testing: Basics concepts of path testing, predicates, path predicates and Achievable paths, path sensitizing, path instrumentation, application of path testing..					
UNIT - II		Lecture Hrs:			
Transaction Flow Testing: transaction flows, transaction flow testing techniques. Dataflow testing: Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing. Domain Testing: domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability					
UNIT - III		Lecture Hrs:			
Paths, Path products and Regular expressions: path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection. Logic Based Testing: overview, decision tables, path expressions, kv charts, specifications.					
UNIT - IV		Lecture Hrs:			
State, State Graphs and Transition testing: state graphs, good & bad state graphs, state testing, Testability tips.					
UNIT - V		Lecture Hrs:			
Graph Matrices and Application: Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. (Student should be given an exposure to a tool like JMeter or Win-runner).					
Text Books:

Course Code	DATA MINING AND BUSINESS INTELLIGENCE	L	T	P	C
		23MCA204b	4	0	0
Semester		II			
Course Objectives:					
The student will define the importance of business intelligence by: <ul style="list-style-type: none"> • Describing key business intelligence terms. • Determining the relevance of data to business • Aligning business intelligence to organizational strategy. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Demonstrate an understanding of the importance of data mining and the principles of business intelligence • Organize and Prepare the data needed for data mining using pre preprocessing techniques • Perform exploratory analysis of the data to be used for mining. • Implement the appropriate data mining methods like classification, clustering or Frequent Pattern mining on large data sets. • Define and apply metrics to measure the performance of various data mining algorithms. • Apply BI to solve practical problems : Analyze the problem domain, use the data collected in enterprise apply the appropriate data mining technique, interpret and visualize the results and provide decision support. 					
UNIT - I	Overview and concepts Data Warehousing and Business Intelligence	Lecture Hrs:			
Why reporting and Analyzing data, Raw data to valuable information-Lifecycle of Data - What is Business Intelligence - BI and DW in today's perspective - What is data warehousing - The building Blocks: Defining Features - Data warehouses and data Imarts - Overview of the components - Metadata in the data warehouse - Need for data warehousing - Basic elements of data warehousing - trends in data warehousing					
UNIT - II	The Architecture of BI and DW	Lecture Hrs:			
BI and DW architectures and its types - Relation between BI and DW - OLAP (Online analytical processing) definitions - Difference between OLAP and OLTP - Dimensional analysis - What are cubes? Drill-down and roll-up - slice and dice or rotation - OLAP models - ROLAP versus MOLAP - defining schemas: Stars, snowflakes and fact constellations					
UNIT - III	Introduction to data mining (DM)	Lecture Hrs:			
Motivation for Data Mining - Data Mining-Definition and Functionalities – Classification of DM Systems - DM task primitives - Integration of a Data Mining system with a Database or a Data Warehouse - Issues in DM – KDD Process					
UNIT - IV	Data Pre-processing	Lecture Hrs:			
Why to pre-process data? - Data cleaning: Missing Values, Noisy Data - Data Integration and transformation - Data Reduction: Data cube aggregation, Dimensionality reduction - Data Compression - Numerosity Reduction - Data Mining Primitives - Languages and System Architectures: Task relevant data - Kind of Knowledge to be mined - Discretization and Concept Hierarchy.					
UNIT - V	Concept Description and Association Rule Mining	Lecture Hrs:			
What is concept description? - Data Generalization and summarization-based characterization - Attribute relevance - class comparisons Association Rule Mining: Market basket analysis - basic concepts - Finding frequent item sets: Apriori algorithm - generating rules – Improved Apriori algorithm – Incremental ARM – Associative Classification – Rule Mining

MASTER OF COMPUTER APPLICATIONS

Course Code	MANAGERIAL ECONOMICS AND FINANCIAL ACCOUNTANCY	L	T	P	C
23MCA204c		4	0	0	3
Semester		II			
Course Objectives:					
<ul style="list-style-type: none">To enable the student to understand and appreciate, with a practical insight, the importance of certain basic issues governing the business operations namely: demand and supply, production function, cost analysis, markets, forms of business organizations, capital budgeting and financial accounting and financial analysis.					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none">Prepare balance sheets of budget.Get the skill to manage finances of a firm/company					
UNIT - I		Lecture Hrs:			
.Introduction & Demand Analysis Definition, Nature and Scope of Managerial Economics. Demand Analysis: Demand Determinants, Law of Demand and its exceptions. Elasticity of Demand: Definition, Types, Measurement and Significance of Elasticity of Demand. Demand Forecasting, Factors governing demand forecasting, methods of demand forecasting.					
UNIT - II		Lecture Hrs:			
Production Function- Isoquants and Isocosts, MRTS, Least Cost Combination of Inputs, Cobb-Douglas Production function, Laws of Returns, Internal and External Economies of Scale. Cost Analysis: Cost concepts. Break-even Analysis (BEA)-Determination of Break-Even Point (simple problems) – Managerial Significance.					
UNIT - III		Lecture Hrs:			
Market structures: Types of competition, Features of Perfect competition, Monopoly and Monopolistic Competition. Price-Output Determination in case of Perfect Competition and Monopoly. Objectives and Policies of Pricing- Methods of Pricing: Cost Plus Pricing. Marginal Cost Pricing, Sealed Bid Pricing, Going Rate Pricing, Limit Pricing, Market Skimming Pricing, Penetration Pricing. Two-Part Pricing, Block Pricing, Bundling Pricing, Peak Load Pricing, Cross Subsidization.					
UNIT - IV		Lecture Hrs:			
Business & New Economic Environment: Characteristic features of Business, Features and evaluation of Sole Proprietorship, Partnership. Joint Stock Company. Public Enterprises and their types, Changing Business Environment in Post-liberalization scenario.					
UNIT - V		Lecture Hrs:			
Introduction to Financial Accounting: Double-Entry Book Keeping, Journal. Ledger. Trial Balance- Final Accounts (Trading Account. Profit and Loss Account and Balance Sheet with simple adjustments). Financial Analysis through ratios: Computation, Analysis and Interpretation of Liquidity Ratios (Current Ratio and quick ratio). Activity Ratios (Inventory turnover ratio and Debtor Turnover ratio).					
Text Books:					
1. Aryasri: Managerial Economics and Financial Analysis, TMH, 2009. 2. Varshney&Maheswari: Managerial Economics, Sultan Chand, 2009.					

Shree Lal

C.S.M.

MASTER OF COMPUTER APPLICATIONS

Course Code	OPERATIONS RESEARCH	L	T	P	C
23MCA205a		3	0	0	3
	Semester	II			
Course Objectives:					
<ul style="list-style-type: none">To impart knowledge in concepts and tools of Operations ResearchTo understand mathematical models used in Operations ResearchTo apply these techniques constructively to make effective business decisions					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none">Solve Linear Programming ProblemsSolve Transportation and Assignment ProblemsUnderstand the usage of game theory and Simulation for Solving Business Problems					
UNIT - I		Lecture Hrs:			
Linear programming problems - Mathematical formulation, graphical method of solution, simplex method					
UNIT - II		Lecture Hrs:			
Duality in linear programming problems, dual simplex method, sensitivity analysis, transportation and assignment problems, Traveling salesman Problem.					
UNIT - III		Lecture Hrs:			
Game theory Introduction, two-person zero-sum games, some basic terms, the maxmin principle, games without saddle points-Mixed Strategies, graphic solution of $2 * n$ and $m*2$ games, dominance property.					
UNIT - IV		Lecture Hrs:			
Sequencing – Job sequencing, johnsons algorithm for n jobs and 2 machines, n jobs and 3 machines, n jobs through m machines, 2 jobs and m machines problems.					
UNIT - V		Lecture Hrs:			
Queuing theory -basic structure of queuing systems, roles of the Poisson and exponential distributions, classification of queues basic results of M/M/1: FIFO systems,Extension to multi-server queues.					
Text Books:					
<ol style="list-style-type: none">Operations Research / R.Pannerselvam, PHI Publications.Operations Research / S.D.Sharma-KedarnathOperations Research /A.M.Natarajan,P.Balasubramani,A. Tamlarasi/Pearson Education.

MASTER OF COMPUTER APPLICATIONS

Course Code	DIGITAL MARKETING	L	T	P	C
23MCA205b		3	0	0	3
	Semester	II			
Course Objectives:					
<ul style="list-style-type: none">The primary objective of this module is to examine and explore the role and importance of digital marketing in today's rapidly changing business environment.It also focuses on how digital marketing can be utilized by organizations and how its effectiveness can be measured.					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none">To examine and explore the role and importance of digital marketing in today's rapidly changing business environment.To focus on how digital marketing can be utilized by organizations and how its effectiveness can be measured.To know the key elements of a digital marketing strategyTo study how the effectiveness of a digital marketing campaign can be measuredTo demonstrate advanced practical skills in common digital marketing tools such as SEO, SEM, Social media and Blogs.					
UNIT - I		Lecture Hrs:			
Online Market space- Digital Marketing Strategy- Components -Opportunities for building Brand- Website - Planning and Creation- Content Marketing.					
UNIT - II		Lecture Hrs:			
Search Engine optimisation - Keyword Strategy- SEO Strategy - SEO success factors - On-Page Techniques - Off-Page Techniques. Search Engine Marketing- How Search Engine works- SEM components- PPC advertising -Display Advertisement					
UNIT - III		Lecture Hrs:			
E- Mail Marketing - Types of E- Mail Marketing - Email Automation - Lead Generation - Integrating Email with Social Media and Mobile- Measuring and maximising email campaign effectiveness. Mobile Marketing- Mobile Inventory/channels- Location based; Context based; Coupons and offers, Mobile Apps, Mobile Commerce, SMS Campaigns-Profiling and targeting.					
UNIT - IV		Lecture Hrs:			
Social Media Marketing - Social Media Channels- Leveraging Social media for brand conversations and buzz. Successful /benchmark Social media campaigns. Engagement Marketing-Building Customer relationships - Creating Loyalty drivers - Influencer Marketing.					
UNIT - V		Lecture Hrs:			
.Digital Transformation & Channel Attribution- Analytics- Ad-words, Email, Mobile, Social Media, Web Analytics - Changing your strategy based on analysis- Recent trends in Digital marketing.					
Text Books:					
1. Fundamentals of Digital Marketing by Puneet Singh Bhatia Publisher: Pearson Education; First edition (July 2017)					
2. Digital Marketing by Vandana Ahuja ;Publisher: Oxford University Press (April 2015)

MASTER OF COMPUTER APPLICATIONS

Course Code	CLOUD COMPUTING	L	T	P	C
23MCA205c		3	0	0	3
	Semester	II			
Course Objectives:					
<ul style="list-style-type: none"> To understand the need of Cloud Computing. To develop cloud applications. To demonstrate design the architecture for new cloud application. To teach how to re-architect the existing application for the cloud. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Outline the procedure for Cloud deployment (L4) Investigate different cloud service models and deployment models (L4) Compare different cloud services. (L4) Design applications for an organization which use cloud environment. (L6) Understand the concept and challenge of big data and why existing technology is inadequate to analyze the big data. (L2) 					
UNIT – I		Lecture Hrs:			
Introduction to cloud computing: Introduction, Characteristics of cloud computing, Evolution of Cloud Computing-Principles of Parallel and Distributed Computing-Cloud Characteristics, Recent trends in Computing- Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Web services.					
UNIT – II		Lecture Hrs:			
CLOUD ARCHITECTURE, SERVICES AND STORAGE: Layered Cloud Architecture Design - NIST Cloud Computing Reference Architecture. Characteristics - Cloud Services (IaaS, PaaS, SaaS) Examples -Deployment Models- Public, Private, Hybrid and community Cloud. Cloud Based services and applications, Advantages of Cloud Storage - Cloud Storage Providers - S3.					
UNIT – III		Lecture Hrs:			
CLOUD ENABLING TECHNOLOGIES Basics of Virtualization Types of Virtualization - Implementation Levels of Virtualization -Virtualization Structures Tools and Mechanisms - Virtualization of CPU, Memory, I/O Devices - Virtual Clusters and Resource management - Virtualization for Data-center Automation.					
UNIT – IV		Lecture Hrs:			
RESOURCE MANAGEMENT AND SECURITY IN CLOUD: Inter Cloud Resource Management - Resource Provisioning and Resource Provisioning Methods Global Exchange of Cloud Resources - Cloud Security: Introduction, CSA Cloud Security Architecture, Authentication, Authorization, Identity & Access Management, Data Security, Key Management, Auditing. Cloud Security Challenges - Software-as-a- Service Security-Security Governance - IAM-Security Standards.					
UNIT – V		Lecture Hrs:			
CLOUD TECHNOLOGIES AND ADVANCEMENTS: Hadoop - MapReduce - Virtual Box-Google App Engine - Programming Environment for GoogleApp Engine Open Stack - Federation in the Cloud - Four Levels of Federation - Federated Services and Applications - Future of Federation.

MASTER OF COMPUTER APPLICATIONS

Course Code	DATASCIENCE LABORATORY	L	T	P	C
23MCA207		0	1	2	2
	Semester	II			
Course Objectives:					
<ul style="list-style-type: none"> • To train the students in solving computational problems • To elucidate solving mathematical problems using Python programming language • To understand the fundamentals of Python programming concepts and its applications. • Practical understanding of building different types of models and their evaluation 					
Course Outcomes (CO):					
<ul style="list-style-type: none"> • Read, write, execute simple Python programs • Decompose a Python program into functions • Manipulate with 1-d,2-d and multidimensional data using Python • Read and write data from/to files in Python programs 					
List of Experiments:					
<ol style="list-style-type: none"> 1. Write a program to demonstrate a) Different numeric data types and b) To perform different Arithmetic Operations on numbers in Python. 2. Write a program to create, append, and remove lists in Python. 3. Write a program to demonstrate working with tuples in Python. 4. Write a program to demonstrate working with dictionaries in Python. 5. Write a program to demonstrate a) arrays b) array indexing such as slicing, integer array indexing and Boolean array indexing along with their basic operations in NumPy. 6. Write a program to compute summary statistics such as mean, median, mode, standard deviation and variance of the given different types of data. 7. Write a script named copyfile.py. This script should prompt the user for the names of two text files. The contents of the first file should be the input that to be written to the second file. 8. Write a program to demonstrate Regression analysis with residual plots on a given data set. 9. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample. 10. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets. 11. Write a program to implement k-Nearest Neighbor algorithm to classify the iris data set. Print both correct and wrong predictions using Java/Python ML library classes. 12. Write a program to implement k-Means clustering algorithm to cluster the set of data stored in CSV file. Compare the results of various “k” values for the quality of clustering. 13. Write a program to build Artificial Neural Network and test the same using appropriate data sets.

Course Code	COMPUTER NETWORKS LABORATORY	L	T	P	C
23MCA208		0	0	4	2
Semester		II			
Course Objectives:					
<ul style="list-style-type: none"> • To understand the working principle of various communication protocols. • To understand the network simulator environment and visualize a network topology and observe its performance • To analyze the traffic flow and the contents of protocol frames 					
Course Outcomes (CO):					
<ul style="list-style-type: none"> • To understand the working principle of various communication protocols. • To understand the network simulator environment and visualize a network topology and observe its performance • To analyze the traffic flow and the contents of protocol frames 					
List of Experiments:					
<ol style="list-style-type: none"> 1. Implement the data link layer framing methods such as character, character-stuffing and bit stuffing. 2. Write a program to compute CRC code for the polynomials CRC-12, CRC-16 and CRC CCIP 3. Develop a simple data link layer that performs the flow control using the sliding window protocol, and loss recovery using the Go-Back-N mechanism. 4. Implement Dijkstra's algorithm to compute the shortest path through a network 5. Take an example subnet of hosts and obtain a broadcast tree for the subnet. 6. Implement distance vector routing algorithm for obtaining routing tables at each node. 7. Implement data encryption and data decryption 8. Write a program for congestion control using Leaky bucket algorithm. 9. Write a program for frame sorting technique used in buffers. 10. Wireshark <ol style="list-style-type: none"> i. Packet Capture Using Wire shark ii. Starting Wire shark iii. Viewing Captured Traffic iv. Analysis and Statistics & Filters. 11. How to run Nmap scan 12. Operating System Detection using Nmap 13. Do the following using NS2 Simulator <ol style="list-style-type: none"> i. NS2 Simulator-Introduction ii. Simulate to Find the Number of Packets Dropped iii. Simulate to Find the Number of Packets Dropped by TCP/UDP iv. Simulate to Find the Number of Packets Dropped due to Congestion v. Simulate to Compare Data Rate& Throughput. vi. Simulate to Plot Congestion for Different Source/Destination vii. Simulate to Determine the Performance with respect to Transmission of Packets

MASTER OF COMPUTER APPLICATIONS

Course Code	EXPLORATORY DATA ANALYTICS WITH PYTHON	L	T	P	C
23MCA209		1	0	2	2
Semester		II			
Course Objectives:					
<ul style="list-style-type: none"> This course is designed to teach students how to analyse different types of data using Python. Students will learn how to prepare data for analysis, perform simple statistical analysis, create meaningful data visualizations and predict future trends from data. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Understanding basics of python for performing data analysis Understanding the data, performing preprocessing, processing and data visualization to get insights from data. Use different python packages for mathematical, scientific applications and for web data analysis. Develop the model for data analysis and evaluate the model performance. 					
UNIT - I		Lecture Hrs:			
Python Fundamentals for Data Analysis Python data structures, Control statements, Functions, Object Oriented programming concepts using classes, objects and methods, Exception handling, Implementation of user-defined Modules and Package, File handling in python.					
UNIT - II		Lecture Hrs:			
Introduction to Data Understanding and Preprocessing Knowledge domains of Data Analysis, Understanding structured and unstructured data, Data Analysis process, Dataset generation, Importing Dataset: Importing and Exporting Data, Basic Insights from Datasets, Cleaning and Preparing the Data: Identify and Handle Missing Values.					
UNIT - III		Lecture Hrs:			
Data Processing and Visualization Data Formatting, Exploratory Data Analysis, Filtering and hierarchical indexing using Pandas. Data Visualization: Basic Visualization Tools, Specialized Visualization Tools, Seaborn Creating and Plotting Maps					
UNIT - IV		Lecture Hrs:			
Mathematical and Scientific applications for Data Analysis Numpy and Scipy Package, Understanding and creating N-dimensional arrays, Basic indexing and slicing, Boolean indexing, Fancy indexing, Universal functions, Data processing using arrays, File input and output with arrays.					
UNIT - V		Lecture Hrs:			
Analysing Web Data wrangling, Web scrapping, Combing and merging data sets, Reshaping and pivoting, Data transformation, String Manipulation, case study for web scrapping					
Text Books:					
<ol style="list-style-type: none"> David Ascher and Mark Lutz, Learning Python, Publisher O'Reilly Media. ReemaThareja, "Python Programming using Problem Solving approach",Oxford University press Wes Mckinney "Python for Data Analysis", First edition, Publisher O'Reilly Media.
