Course Code	ADVANCED THERMODYNAMICS	L	T	P	C
23HPC8801		3	0	0	3
Semester		I			
Course Objectives: Student will be able to					
<ul style="list-style-type: none"> Solve theoretical and applied thermodynamics problems that are directly applicable to situations faced in research and industry. Significant emphasis is placed on the integration of recent thermodynamics-related research into the traditional resources in order to foster critical analysis of current work as it relates to fundamental principles. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Describe and calculate thermodynamic properties of single-phase and multi-phase systems Apply the laws of statistical and classical thermodynamics to chemically reactive systems, kinetics, and combustion. Relate course principles to solve problems regarding gas turbines, combustion, refrigeration, and solar energy. Communicate engineering knowledge of thermodynamics through written and verbal means. 					
UNIT – I		Lecture Hrs:9			
AVAILABILITY ANALYSIS AND THERMODYNAMIC PROPERTY RELATIONS					
Reversible work - availability - irreversibility and second – law efficiency for a closed system and steady – state control volume. Availability analysis of simple cycles. Thermodynamic potentials. Maxwell relations. Generalized relations for changes in entropy - internal energy and enthalpy - generalized relations for Cp and CV Clausius Clay person equation, Joule – Thomson coefficient. Bridgeman tables for thermodynamic relations.					
UNIT – II		Lecture Hrs:9			
REAL GAS BEHAVIOUR AND MULTI – COMPONENT SYSTEMS					
Different equations of state – fugacity – compressibility - principle of corresponding States - Use of generalized charts for enthalpy and entropy departure - fugacity coefficient, Lee – Kesler generalized three parameter tables. Fundamental property relations for systems of variable composition. Partial molar properties. Real gas mixtures - Ideal solution of real gases and liquid - activity - equilibrium in multi phase systems - Gibbs phase rule for non – reactive components					
UNIT – III		Lecture Hrs:9			
CHEMICAL THERMODYNAMICS AND EQUILIBRIUM					
Thermo chemistry-First law analysis of reacting systems-Adiabatic flame temperature-entropy change of reacting systems- Second law analysis of reacting systems- Criterion for reaction equilibrium. Equilibrium constant for gaseous mixtures-evaluation of equilibrium composition.					
UNIT – IV		Lecture Hrs:9			
Analysis of vapour power & Vapour compression refrigeration cycles:					
Rankine cycle with superheat, reheat and refrigeration - Exergy analysis, Super –critical and ultra-super-critical Rankine cycle. Vapour compression refrigeration Systems, Analysis of vapour refrigeration systems, Commonly used refrigerants.					
UNIT – V		Lecture Hrs:			
Analysis of Gas power cycles:					
IC Engines : Air standard Otto, Diesel and Dual cycle Gas turbines: Air standard Brayton cycle, Effect of reheat, inter cooling and regeneration, Combined gas and vapour power cycles.					
Textbooks:

Course Code	ADVANCED HEAT AND MASS TRANSFER	L	T	P	C
23HPC8802		3	0	0	3
Semester		I			
Course Objectives: Student will be able to					
<ul style="list-style-type: none"> • Develop the ability to use the heat transfer concepts for various applications like finned systems, turbulence flows, high speed flows. • analyze the thermal analysis and sizing of heat exchangers and to learn the heat transfer coefficient for compact heat exchanges. • Achieve an understanding of the basic concepts of phase change processes and mass transfer. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Apply the law of thermodynamics to engines. 					
UNIT – I		Lecture Hrs:12			
CONDUCTION AND RADIATION HEAT TRANSFER					
One dimensional energy equations and boundary condition - three-dimensional heat conduction equations - extended surface heat transfer - conduction with moving boundaries - radiation in gases and vapour. Gas radiation and radiation heat transfer in enclosures containing absorbing and emitting media – interaction of radiation with conduction and convection.					
UNIT – II		Lecture Hrs: 12			
TURBULENT FORCED CONVECTIVE HEAT TRANSFER					
Momentum and energy equations - turbulent boundary layer heat transfer - mixing length concept - turbulence model – k ϵ model - analogy between heat and momentum transfer – Reynolds, Colburn, Prandtl turbulent flow in a tube - high speed flows.					
UNIT – III		Lecture Hrs: 10			
PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGER					
Condensation with shears edge on bank of tubes - boiling – pool and flow boiling – heat exchanger – ϵ – NTU approach and design procedure - compact heat exchangers.					
UNIT – IV		Lecture Hrs: 10			
NUMERICAL METHODS IN HEAT TRANSFER					
Finite difference formulation of steady and transient heat conduction problems – discretization schemes – explicit - Crank Nicolson and fully implicit schemes - control volume formulation steady one-dimensional convection and diffusion problems - calculation of the flow field – SIMPLER Algorithm.					
UNIT – V		Lecture Hrs: 12			
MASS TRANSFER AND ENGINE HEAT TRANSFER CORRELATION					
Mass transfer - vaporization of droplets - combined heat and mass transfers - heat transfer correlations in various applications like I.C. engines - compressors and turbines.

Course Code	ADVANCED TURBO MACHINES	L	T	P	C
23HPE8801	Program Elective Course - I	3	0	0	3
Semester		I			
Course Objectives: Student will be able to					
<ul style="list-style-type: none"> Develop the ability to use the turbo concepts for various applicants like steam nozzles, steam turbines etc. Achieve an understanding of the basic concepts of centrifugal, axial, rotary compressors and axial flow gas turbines. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> On successful completion of this course the student will be able to understand the concept of turbo machines and its applications. 					
UNIT – I		Lecture Hrs:9			
Fundamentals of Turbo machines: Classification, Applications Thermodynamic analysis; Isentropic flow, Energy transfer; Efficiencies; static and Stagnation conditions; continuity equation; Euler's flow through variable cross sectional area; unsteady flow in turbo machines.					
UNIT – II		Lecture Hrs:9			
Steam Nozzles: Effect of back –pressure on the analysis; Design of nozzles. Steam Turbines of C & C –D nozzles: Impulse Turbines: work done and velocity triangles; Efficiencies; Constant Reaction Blading; Design of blade passages, angles and height; Secondary flow; leakage losses; Thermodynamic analysis of steam turbines.					
UNIT – III		Lecture Hrs:9			
Gas Dynamics: Fundamentals thermodynamic concepts; Isentropic conditions; Mach number and Area–Velocity relation; Dynamic pressure; normal shock relations for perfect gas; supersonic flow, oblique shock waves ; normal shock recovery ; detached shocks ; Aero foil theory. Centrifugal Compressor: Types; Velocity triangles and efficiencies; Blade passage design; Diffuser and pressure recovery; slip factor; stanitz and stodolas formulae; Effect of inlet mach number; Prewirl; performance					
UNIT – IV		Lecture Hrs:9			
Axial Flow Compressors: Flow analysis, work and velocity triangles; Efficiencies; Thermodynamic analysis; stage pressure rise ; Degree of reaction ; stage loading; general design, effect of velocity incidence; performance. Cascade Analysis: Geometry and Terminology; Blade forces, Efficiency; losses; free and forced vortex blades.					
UNIT – V		Lecture Hrs:8			
Axial Flow Gas Turbines: Work done; velocity triangles and efficiencies; thermodynamic flow analysis; degree of reaction; Zweifel's relation; Design cascade analysis–Soderberg–Hawthorne – ainley-correlations; secondary flow; Free-vortex blades; Blade angles for variable degree of reaction; Actuator disc theory; Stresses in blades; Blade assembling; materials and cooling of blades; performance; Matching of compressor and turbine; off-design performance.

Course Code	ADVANCED REFRIGERATION AND AIRCONDITIONING (PE-I)	L	T	P	C
23HPE8802		3	0	0	3
Semester		I			
Course Objectives: Student will be able to					
<ul style="list-style-type: none"> To teach the students about the methods of Refrigeration and its types, Psychrometry and its principles. Teaching the cycle analysis pertaining to various Refrigeration systems, Air-conditioning systems, cooling load calculations. 					
Course Outcomes:- Student will be able to					
<ul style="list-style-type: none"> Relate the performance of a vapour compression refrigeration cycles under specified inlet and outlet conditions. Identify the modifications required in an impossible reversed Carnot cycle to convert it into practical cycle for refrigeration applications. Demonstrate the working principle and coefficient of performance of a heat pump, heat engine and refrigerator Illustrate the working principles, limitations of practical aqua ammonia, LiBr-Water and Electrolux vapour absorption refrigeration systems. Analyze theoretical and practical steam jet refrigeration cycles with T-S and P-h charts by stating merits, limitations, etc. Discuss the measures to protect the ozone layer through global control, eventually elimination of production and utilization of ozone depleting substances. Classify the equipment used for the refrigeration, air conditioning purposes with suitable materials and refrigerant pairs. CO 4 Construct the sensible heat factor lines, locate alignment circle and SHF scale on a psychrometric chart for the cooling load calculations of air conditioning systems. Explain thermal comfort conditions with respect to effective temperature, relative humidity, etc. and their impact on human comfort, productivity and health. CO 5 Distinguish the equipment required for air conditioning systems, study the operating principles, safety controls employed in air conditioning systems. Assess the principles of psychrometry to calculate and design the air conditioning systems for particular purpose. Compare the various heat pump circuits for heating, cooling purposes with suitable industrial applications. 					
UNIT – I		Lecture Hrs:09			
Refrigerants: Desirable properties-thermodynamic-chemical and transport properties-designation of refrigerants inorganic, halo carbon refrigerants - secondary refrigerants - Properties of mixtures of refrigerants. Ozone depletion potential and global warming potential-effect of refrigerants-alternative refrigerants.					
UNIT – II		Lecture Hrs:09			
Vapour Compression Refrigeration: Analysis and Performance of Complete vapour compression Refrigeration system. Components of Vapour Compression Refrigeration System: The condensing unit-Evaporators-Expansion valve; Refrigerants - Properties - ODP and GWP. Compound Compression: Need; Compounding with external inter cooling, Flash mixing Flash inter-cooling - liquid flash internal cooling - Multi Pressure-(Multistage) systems. Cascade System-Applications					
UNIT – III		Lecture Hrs:09			
Vapor absorption Refrigeration system –Simple and modified aqua-ammonia system - Representation on Enthalpy-Concentration diagram. Lithium- Bromide system Three fluid system-HCOP. Air Refrigeration: Applications - Air Craft Refrigeration- Simple, Bootstrap, Regenerative and Reduced ambient systems - Problems based on different systems. Steam Jet refrigeration system: Representation on T-s and h-s diagrams - limitations and applications. Unconventional Refrigeration systems: working principles of Thermo-electric Refrigeration-Vortex tube.					
UNIT – IV		Lecture Hrs:09			
INTRODUCTION TO AIR CONDITIONING Psychrometric properties and processes, sensible and latent heat loads, characterization, need for

Course Code	DESIGN OF THERMAL SYSTEMS	L	T	P	C
23HPE8803	Program Elective Course - I	3	0	0	3
Semester		I			
Course Objectives: Student will be able to					
<ul style="list-style-type: none"> • Know the concepts of heat exchangers and basic design methods of heat exchangers • Achieve an understanding of the basic concepts of Vaporizers, Evaporators and Re boilers, Extended Surfaces. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Understand the concept of Heat exchanger design, extended surfaces and design of cooling towers etc. 					
UNIT – I		Lecture Hrs:09			
<p>Classification of heat exchangers: Introduction, Recuperation and Regeneration–Tubular heat exchangers: double pipe, shell and tube heat exchanger, Plate heat exchangers, Gasketed plate heat exchanger, spiral plate heat exchanger, Lamella heat exchanger, extended surface heat exchanger, Plate fin, and Tubular fin.</p> <p>Basic Design Methods of Heat Exchangers: Introduction, Basic equations in design, Overall heat transfer coefficient – LMTD method for heat exchanger analysis– parallel flow, counter flow, multi pass, cross flow heat exchanger design calculations.</p> <p>Double Pipe Heat Exchanger: Film Coefficient for fluids in annulus, fouling factors, calorific temperature, average fluid temperature, the calculation of double pipe exchanger, Double pipe exchangers in series, parallel arrangements.</p>					
UNIT – II		Lecture Hrs:09			
<p>Shell and Tube Heat Exchangers: Tube layouts for exchangers, baffle Heat exchangers, calculation of shell and tube heat exchangers – shell side film coefficients, Shell side equivalent diameter, the true temperature difference in a 1-2 heat exchanger, influence of approach temperature on correction factor, shell side pressure drop, tube side pressure drop, Analysis of performance of 1-2 heat exchanger, and design calculation of shell and tube heat exchangers. Flow arrangements for increased heat recovery, the calculations of 2-4 exchangers.</p> <p>Condensation of single vapors: Calculation of a horizontal condenser, vertical condenser, De-super heater condenser, vertical condenser–sub-cooler, horizontal condenser–vertical reflux type condenser, condensation of steam.</p>					
UNIT – III		Lecture Hrs:09			
Vaporizers, Evaporators and Re boilers: Vaporizing processes, forced circulation vaporizing exchangers, natural circulation vaporizing exchangers, calculations of are boiler.					
UNIT – IV		Lecture Hrs:09			
<p>Extended Surfaces: Longitudinal fins, weighted fin efficiency curve, calculation of a double pipe fin efficiency curve, calculation of a double pipe finned exchanger, calculation of a longitudinal fin shell and tube exchanger.</p> <p>Direct Contact Heat Exchanger: Cooling towers, relation between wet bulb and dew point temperatures, the Lewis number, and classification of cooling towers, cooling tower internals and the roll of fill, Heat balance</p>					
UNIT – V		Lecture Hrs:09			
Heat transfer by simultaneous diffusion and convection. Analysis of cooling tower requirements, Design of cooling towers, Determination of the number of diffusion units, calculation of cooling tower performance.					
Textbooks:

Course Code	FUELS COMBUSTION & ENVIRONMENT	L	T	P	C
23HPE8804	Program Elective Course - II	3	0	0	3
Semester		I			
Course Objectives: Student will be able					
To know the concepts of stoichiometry & kinetics for Solid, Liquid & Gaseous Fuels . To achieve an understanding of the basic concepts of combustion equipments					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Understand the concept of various fuels and combustion and effect of environment. 					
UNIT – I					Lecture Hrs:9
CHARACTERIZATION					
Fuels - Types and Characteristics of Fuels - Determination of Properties of Fuels – Fuels Analysis-Proximate and Ultimate Analysis-Moisture Determination-Calorific Value Gross & Net Calorific Values - Calorimetry - DuLong's Formula for CV Estimation -Flue gas Analysis - Orsat Apparatus - Fuel & Ash Storage & Handling – Spontaneous Ignition Temperatures.					
UNIT – II					Lecture Hrs:9
Solid Fuels					
Types - Coal Family - Properties - Calorific Value - ROM, DMMF, DAF and Bone Dry Basis - Ranking - Bulk & Apparent Density - Storage - Wash ability - Coking & Caking Coals – Renewable Solid Fuels - Biomass - Wood Waste - Agro Fuels – Manufactured Solid Fuels.					
Liquid Fuels					
Types - Sources - Petroleum Fractions - Classification - Refining - Properties of Liquid Fuels - Calorific Value, Specific Gravity, Flash & Fire Point, Octane Number, Cetane Number etc, -Alcohols-Tar Sand Oil – Liquefaction of Solid Fuels.					
UNIT – III					Lecture Hrs:9
GASEOUS FUELS					
Classification-Composition & Properties-Estimation of Calorific Value-Gas Calorimeter. Rich & Lean Gas - Wobbe Index - Natural Gas - Dry & Wet Natural Gas -Stripped NG - Foul & Sweet NG - LPG - LNG - CNG - Methane - Producer Gas -Gasifiers - Water Gas - Town Gas - Coal Gasification - Gasification Efficiency - Non –Thermal Route-Biogas-Digesters -Reactions -Viability-Economics.					
UNIT – IV					Lecture Hrs:9
COMBUSTION: STOICHIOMETRY & KINETICS					
Stoichiometry - Mass Basis & Volume Basis - Excess Air Calculation - Fuel & Flue Gas Compositions - Calculations -Rapid Methods - Combustion Processes –Stationary Flame - Surface or Flameless Combustion -Submerged Combustion - Pulsating & Slow Combustion Explosive Combustion. Mechanism of Combustion -Ignition & Ignition Energy -Spontaneous Combustion – Flame Propagation -Solid, Liquid & Gaseous Fuels Combustion - Flame Temperature - Theoretical, Adiabatic & Actual – Ignition Limits -Limits of Inflammability.					
UNIT – V					Lecture Hrs:9
COMBUSTION EQUIPMENTS					
Coal Burning Equipment's - Types - Pulverized Coal Firing - Fluidized Bed Firing –Fixed Bed & Recycled Bed-Cyclone Firing-Spreader Stokers-Vibrating Grate Stokers - Sprinkler Stokers, Traveling Grate Stokers. Oil Burners - Vaporizing Burners, Atomizing Burners - Design of Burners. Gas Burners - Atmospheric Gas Burners – Air Aspiration Gas Burners - Burners Classification according to Flame Structures – Factors Affecting Burners & Combustion.					
Textbooks:

Course Code	FINITE ELEMENT ANALYSIS IN THERMAL ENGINEERING (PE-II)	L	T	P	C
23HPE8805		3	0	0	3
Semester		I			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To provide the fundamental concepts of the theory of the finite element method • To develop proficiency in the application of the finite element method (modeling, analysis, and interpretation of results) to realistic engineering problems through the use of a major commercial general-purpose finite element code. 					
Course Outcomes: - Student will be able					
<ul style="list-style-type: none"> • To obtain an understanding of the fundamental theory of the FEA method; • To develop the ability to generate the governing FE equations for systems governed by partial differential equations; • To understand the use of the basic finite elements for structural applications using truss, beam, frame, and plane elements; and • To understand the application and use of the FE method for heat transfer problems 					
UNIT – I		Lecture Hrs:9			
<p>Introduction to FEM: basic concepts, application of FEM, general description, advantages of FEM, comparison of FEM with other methods : finite difference method, variational method, Galerkin Method, basic element shapes, interpolation function. Virtual energy principle, treatment of boundary conditions, solution of system of equations, basic equations of elasticity, strain displacement relations.</p> <p>1-D structural problems: axial bar element, stiffness matrix, load vector, temperature effects, quadratic shape function, analysis of trusses – plane truss and space truss elements.</p>					
UNIT – II		Lecture Hrs:9			
<p>Analysis of beams, frames – Hermite shape functions, stiffness matrix, load vector problems, analysis.</p> <p>2-D problems – CST, force terms, stiffness matrix and load vector, boundary conditions, Iso-parametric element, Quadratic element, shape functions, Numerical Integration, 3-D problems – Tetrahedron element, Jacobian matrix, stiffness matrix.</p>					
UNIT – III		Lecture Hrs:9			
<p>Axis Symmetric formulations, Finite Element Modeling- Triangular element, Problem modelling and Boundary conditions</p> <p>Dynamic considerations, Dynamic equations, consistent mass matrix, Eigen values, Eigen vector, natural frequencies, mode shapes, modal analysis.</p>					
UNIT – IV		Lecture Hrs:9			
<p>Scalar field problems – Generalized Heat Conduction Equation – Variation Principle – Boundary Conditions – Internal heat generation, heat flux and convection - 1-D Steady state Heat conduction – Thermal load vector - 1-D fine element – Quadratic fine elements</p> <p>1-D unsteady state heat conduction – Thermal load vector - 2-D steady state heat conduction – Concepts of 3D heat conduction</p> <p>Finite Element Formulation of Torsion, Potential flow, seepage and fluid flow in ducts.</p>					
UNIT – V		Lecture Hrs:8			
<p>Computer Implementation : Pre-processing , mesh generation, elements connecting, boundary conditions, input of material and processing characteristics – solutions and post processing - overview and application packages</p>					
Textbooks:					
Finite Element Methods, Alavala, PHI

Course Code	DESIGN OF HEAT EXCHANGERS	L	T	P	C
23HPE8806	Program Elective Course - II	3	0	0	3
Semester		I			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To learn the thermal and stress analysis on various parts of the heat exchangers • To analyze the sizing and rating of the heat exchangers for various applications 					
Course Outcomes:- Student will be able to					
<ul style="list-style-type: none"> • design the heat exchanger based on the information provided for a particular application and do the cost economic analysis 					
UNIT – I		Lecture Hrs:9			
FUNDAMENTALS OF HEAT EXCHANGER					
Temperature distribution and its implications types – shell and tube heat exchangers – regenerators and recuperators – analysis of heat exchangers – LMTD and effectiveness method.					
UNIT – II		Lecture Hrs:9			
FLOW AND STRESS ANALYSIS					
Effect of turbulence – friction factor – pressure loss – stress in tubes – header sheets and pressure vessels – thermal stresses, shear stresses-types of failures.					
UNIT – III		Lecture Hrs:9			
DESIGN ASPECTS					
Heat transfer and pressure loss – flow configuration – effect of baffles – effect of deviations from ideality – design of double pipe-finned tube-shell and tube heat exchangers-simulation of heat exchangers.					
UNIT – IV		Lecture Hrs:8			
COMPACT AND PLATE HEAT EXCHANGERS					
Types – merits and demerits – design of compact heat exchangers, plate heat exchangers Performance influencing parameters-limitations.					
UNIT – V		Lecture Hrs:8			
CONDENSERS AND COOLING TOWERS					
Design of surface and evaporative condensers – cooling tower – performance characteristics.

Course Code	THERMAL SCIENCE LABORATORY	L	T	P	C
23HPC8803			0	0	4
Semester		I			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To become familiar with the instruments and equipment for the measurement of exhaust emissions. • To become familiar with heat transfer measurement. • To become familiar with solar parameters. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Become familiar with the measurement equipment's and procedure for exhaust emission, heat transfer and solar parameters 					
List of Experiments:					
<ol style="list-style-type: none"> 1. To find the exhaust emissions of an automobile (HC, CO, NOX) . 2. Analysis of exhaust gases on IC engine. 3. Combustion analysis of CI engine 4. To find Octane number of given blends of fuel. 5. Performance analysis of Heat Pipe 6. Two Phase flow heat transfer estimation. 7. To estimate the COP of a vapour compression refrigeration system (Refrigerator). 8. To find the solar flat plate collector efficiency. 9. To find direct solar incident flux absorbed by using Pyranometer or concentric parabolic collector. 10. Case study for energy audit.

Course Code	RESEARCH METHODOLOGY AND IPR	L	T	P	C
23HMC001		2	0	0	2
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> • Identify an appropriate research problem in their interesting domain. • Understand ethical issues understand the Preparation of a research project thesis report. • Understand the Preparation of a research project thesis report • Understand the law of patent and copyrights. • Understand the Adequate knowledge on IPR 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Analyze research related information • Follow research ethics • Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity. • Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular. • Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits. 					
UNIT - I		Lecture Hrs:12			
Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, scope, and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations					
UNIT - II		Lecture Hrs:12			
Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.					
UNIT - III		Lecture Hrs:12			
Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.					
UNIT - IV		Lecture Hrs:12			
Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.					
UNIT - V		Lecture Hrs:12			
New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Course Code	ADVANCED IC ENGINES	L	T	P	C
23HPC8805		3	0	0	3
Semester		II			
Course Objectives: Student will be able					
To understand the underlying principles of operation of different IC Engines and components. To provide knowledge on pollutant formation, control, alternate fuel etc.					
Course Outcomes:- Student will be able to					
compare the operations of different IC Engine and components and can evaluate the pollutant formation, control, alternate fuel					
UNIT – I		Lecture Hrs:9			
SPARKIGNITIONENGINES					
SparkignitionEnginemixturerequirements–Fuel–Injectionsystems–Monopoint, Multi point injection, Direct injection – Stages of combustion – Normal and abnormal combustion –factors affecting knock– Combustion chambers.					
UNIT – II		Lecture Hrs:9			
COMPRESSIONIGNITIONENGINES					
States of combustion in C.I. Engine–Direct and indirect injection systems–Combustion chambers – Fuel spray behaviour – spray structure, spray penetration and evaporation–air motion–Introduction to Turbo charging.					
UNIT – III		Lecture Hrs:9			
POLLUTANTFORMATIONANDCONTROL					
Pollutant– Sources – Formation of carbon monoxide, Un burnt hydro carbon, NOx, Smoke and Particulate matter–MethodsofcontrollingEmissions–CatalyticconvertersandParticulate Traps – Methods of measurements and Introduction to emission norms and Driving cycles.					
UNIT – IV		Lecture Hrs:9			
ALTERNATIVE FUELS					
Alcohol, Hydrogen, Natural Gas and Liquefied Petroleum Gas- Properties, Suitability, Merits and Demerits as fuels, Engine Modifications.					
UNIT – V		Lecture Hrs:8			
RECENTTRENDS					
Lean Burn Engines – Stratified charge Engines – homogeneous charge compression ignition engines–Plasma Ignition–Measurement techniques–laser Doppler, Anemometry.					
Textbooks:

Course Code	COMPUTATIONAL FLUID DYNAMICS	L	T	P	C
23HPC8806		3	0	0	3
Semester		II			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To develop finite difference and finite volume discretized forms of the CFD equations. • To formulate explicit & implicit algorithms for solving the Euler Eqns & Navier Stokes Eqns. 					
Course Outcomes:- Student will be able to					
<ul style="list-style-type: none"> • Formulate explicit & implicit algorithms for solving the Euler Eqns & Navier Stokes Eqns. 					
UNIT – I					Lecture Hrs:9
GOVERNING DIFFERENTIAL EQUATION AND FINITE DIFFERENCE METHOD					
Classification, Initial and Boundary conditions, Initial and Boundary value problems. Finite difference method, Central, Forward, Backward difference, Uniform and non-uniform Grids, Numerical Errors, Grid Independence Test.					
UNIT – II					Lecture Hrs:9
CONDUCTION HEAT TRANSFER					
Steady one-dimensional conduction, Two and Three dimensional steady state problems, Transient one-dimensional problem, Two-dimensional Transient Problems.					
UNIT – III					Lecture Hrs:9
INCOMPRESSIBLE FLUID FLOW					
Governing Equations, Stream Function – Vorticity method, Determination of pressure for viscous flow, SIMPLE Procedure of Patankar and Spalding, Computation of Boundary layer flow, Finite difference approach.					
UNIT – IV					Lecture Hrs:8
CONVECTION HEAT TRANSFER AND FEM					
Steady One-Dimensional and Two-Dimensional Convection – Diffusion, Unsteady one-dimensional convection–Diffusion, Unsteady two-dimensional convection–Diffusion - Introduction to finite element method – Solution of steady heat conduction by FEM – In compressible flow – Simulation by FEM					
UNIT – V					Lecture Hrs:9
TURBULENCE MODELS					
Algebraic Models – One equation model, K - Models, Standard and High and Low Reynolds number models, Prediction of fluid flow and heat transfer using standard codes.					
Textbooks:

Course Code	INSTRUMENTATION FOR THERMAL ENGINEERING	L	T	P	C
23HPE8807	Program Elective Course - III	3	0	0	3
Semester		II			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To provide knowledge on various measuring instruments. • To provide knowledge on advance measurement techniques. • To understand the various steps involved in error analysis and uncertainty analysis. 					
Course Outcomes:- Student will be able to					
Understand the various steps involved in error analysis and uncertainty analysis.					
UNIT – I		Lecture Hrs:9			
MEASUREMENT CHARACTERISTICS					
Instrument Classification, Characteristics of Instruments–Static and dynamic, experimental error analysis, Systematic and random errors, Statistical analysis, Uncertainty, Experimental planning and selection of measuring instruments, Reliability of instruments.					
UNIT – II		Lecture Hrs:9			
MICROPROCESSORS AND COMPUTERS IN MEASUREMENT					
Data logging and acquisition – use of sensors for error reduction, elements of microcomputer inter facing, intelligent instruments in use.					
UNIT – III		Lecture Hrs:9			
MEASUREMENT OF PHYSICAL QUANTITIES					
Measurement of thermo-physical properties, instruments for measuring temperature, pressure and flow, use of sensors for physical variables.					
UNIT – IV		Lecture Hrs:9			
ADVANCED MEASUREMENT TECHNIQUES					
Shadow graph, Schlieren, Interferometer, Laser Doppler Anemometer, Hot wire Anemometer, heat flux sensors, Telemetry in measurement.					
UNIT – V		Lecture Hrs:9			
MEASUREMENT ANALYSERS					
Orsat apparatus, Gas Analyzers, Smoke meters, gas chromatography, spectrometry.

Course Code	CRYOGENIC ENGINEERING Program Elective Course - III	L	T	P	C
23HPE8808			3	0	0
Semester		II			
Course Objectives: Student will be able to					
<ul style="list-style-type: none"> • Impart basic knowledge of low temperature generation, difficulties in maintain in glow temperature and solutions • Understand applications of cryogenic refrigeration • Understand storage of cryogenic liquids and equipment's, instruments used 					
Course Outcomes:- Student will be able to					
<ul style="list-style-type: none"> • Upon the completion of the course student will be able to understand the use of cryogenic systems, real-time difficulties in storing cryogenic liquids 					
UNIT – I		Lecture Hrs:9			
INTRODUCTION					
Insight on Cryogenics, Properties of Cryogenic fluids, Material properties at Cryogenic Temperatures. Applications of Cryogenics in Space Programs, Superconductivity, Cryo Metallurgy, Medical applications.					
UNIT – II		Lecture Hrs:9			
LIQUEFACTIONCYCLES					
Carnot Liquefaction Cycle, F.O.M. and Yield of Liquefaction Cycles. Inversion Curve – JouleThomsonEffect.LindeHampsonCycle,PrecooledLindeHampsonCycle,Claudes Cycle Dual Cycle, Ortho-Para hydrogen conversion, Eollins cycle, Simpson cycle, Critical Components in Liquefaction Systems					
UNIT – III		Lecture Hrs:9			
SEPARATIONOFCRYOGENICGASES					
Binary Mixtures, T-C and H-C Diagrams, Principle of Rectification, Rectification Column Analysis-Mc CabeThiele Method. Adsorption Systems for purification.					
UNIT – IV		Lecture Hrs:9			
CRYOGENICREFRIGERATORS					
J.T.Cryocoolers,StirlingCycleRefrigerators,G.M.Cryocoolers,PulseTubeRefrigerators Regenerators used in Cryogenic Refrigerators, Dilution refrigerators, Magnetic Refrigerators					
UNIT – V		Lecture Hrs:09			
HANDLINGOFCRYOGENS					
CryogenicDewar,CryogenicTransferLines.InsulationsusedinCryogenicSystems,InstrumentationtomeasureFlo w, Level and Temperature

Course Code	THERMAL AND NUCLEAR POWER PLANTS	L	T	P	C
23HPE8809	Program Elective Course - III	3	0	0	3
Semester		II			
Course Objectives: Student will be able to					
Impart knowledge about various components and equipment's used in a thermal and nuclear power plant, their maintenance and performance analysis and economic analysis.					
Course Outcomes:- Student will be able to					
Understanding about the components used, their operation and maintenance and performance of it.					
UNIT – I		Lecture Hrs:9			
Introduction – Sources of Energy, types of Power Plants, Direct Energy Conversion System, Energy Sources in India, Recent developments in Power Generation. Combustion of Coal, Volumetric Analysis, Gravimetric Analysis, Flue gas Analysis.					
Steam Power Plants: Introduction – General Layout of Steam Power Plant, Modern Coal-fired Steam Power Plants, Power Plant cycles, Fuel handling, Combustion Equipment, Ash handling, Dust Collectors.					
UNIT – II		Lecture Hrs:9			
Steam Generators: Types, Accessories, Feed water heaters, Performance of Boilers, Water Treatment, Cooling Towers, Steam Turbines, Compounding of Turbines, Steam Condensers, Jet and Surface Condensers.					
Gas Turbine Power Plant: Cogeneration, Combined cycle Power Plants, Analysis, Waste-Heat Recovery, IGCC Power Plants, Fluidized Bed Combustion – Advantages & Disadvantages.					
UNIT – III		Lecture Hrs:9			
Nuclear Power Plants: Nuclear Physics, Nuclear Reactors, Classification – Types of Reactors, Site Selection, Methods of enriching Uranium, Applications of Nuclear Power Plants.					
Nuclear Power Plants Safety: By-Products of Nuclear Power Generation, Economics of Nuclear Power Plants, Nuclear Power Plants in India, Future of Nuclear Power.					
UNIT – IV		Lecture Hrs:9			
Economics of Power Generation: Factors affecting the economics, Load Factor, Utilization factor, Performance and Operating Characteristics of Power Plants. Economic Load Sharing, Depreciation, Energy Rates, Criteria for Optimum Loading, Specific Economic energy problems.					
UNIT – V		Lecture Hrs:9			
Power Plant Instrumentation: Classification, Pressure measuring instruments, Temperature measurement and Flow measurement. Analysis of Combustion gases, Pollution–Types, Methods of Control.					
Textbooks:

23HPE8810		3	0	0	3
Semester		II			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To learn basic principles underlying piping, pumping, heat exchangers; modeling and optimization in design of thermal systems. • To develop representational modes of real processes and systems. • To optimization concerning design of thermal systems. 					
Course Outcomes:- Student will be able to					
Understand modeling and optimization of Thermal systems.					
UNIT – I		Lecture Hrs:9			
DESIGNCONCEPTS Design Principles, Workable Systems, Optimal Systems, Matching of System Components, Economic Analysis, Depreciation, Gradient Present Worth factor.					
UNIT – II		Lecture Hrs:9			
MATHEMATICALMODELLING Equation Fitting, Nomography , Empirical Equation , Regression Analysis , Different Modes of Mathematical Models, Selection, Computer Programmes for Models.					
UNIT – III		Lecture Hrs:9			
MODELLINGTHERMALEQUIPMENTS Modelling Heat Exchangers, Evaporators, Condensers, Absorption and Rectification Columns Compressors, Pumps, Simulation Studies, Information Flow Diagram , Solution Procedures.					
UNIT – IV		Lecture Hrs:9			
OPTIMIZATION Modelling Heat Exchangers, Evaporators, Condensers, Absorption and Rectification Columns Compressors, Pumps, Simulation Studies, Information Flow Diagram, Solution Procedures.					
UNIT – V		Lecture Hrs:9			
DYNAMICBEHAVIOUR Steady state Simulation, Laplace Transformation, Feedback Control Loops, Stability Analysis, Non-Linearities.

Course Code	ENVIRONMENTAL ENGINEERING AND POLLUTION CONTROL (PE-IV)	L	T	P	C
23HPE8811		3	0	0	3
Semester		II			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To impart knowledge on the atmosphere and its present condition, global warming and eco legislations. • To detail on the sources of air, water and noise pollution and possible solutions for mitigating their degradation. • To elaborate on the technologies available for generating energy from waste. 					
Course Outcomes:- Student will be able to					
<ul style="list-style-type: none"> • Understand detail on the sources of air, water and noise pollution and possible solutions for mitigating their degradation. 					
UNIT – I		Lecture Hrs:9			
INTRODUCTION					
Global atmospheric change – greenhouse effect – Ozone depletion - natural cycles -mass and energy transfer – material balance – environmental chemistry and biology –impacts – environmental. Legislations. Pollutants - sources and effect – air pollution meteorology–atmospheric dispersion– indoor air quality-control methods and equipment’s-issues in air pollution control– air sampling and measurement.					
UNIT – II		Lecture Hrs:9			
AIRPOLLUTIONCONTROL					
Air Pollution Control equipment for particulate matter & gaseous pollutants– gravity settling chambers, centrifugal collectors, wet collectors, fabric filters, electrostatic precipitator (ESP). –Adsorption, Absorption, Scrubbers, Condensation and Combustion.					
UNIT – III		Lecture Hrs:9			
WATERPOLLUTION					
Water resources - water pollutants - characteristics – quality - water treatment systems –waste water treatment- treatment, utilization and disposal of sludge- monitoring compliance with standards.					
UNIT – IV		Lecture Hrs:9			
WASTEMANAGEMENT					
Sources and Classification–Solid waste–Hazardous waste-Characteristics– Collection and Transportation - Disposal – Processing and Energy Recovery – Waste minimization.					
UNIT – V		Lecture Hrs:9			
OTHER TYPES OF POLLUTION FROM INDUSTRIES					
Noise pollution and its impact - oil pollution - pesticides - instrumentation for pollution control– water pollution from tanneries and other industries and their control–environment impact assessment for various projects –case studies.

Course Code	ALTERNATIVE ENERGY SOURCES	L	T	P	C
23HPE8812	Program Elective Course - IV	3	0	0	3
Semester		II			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> To create awareness about the availability of various non-conventional energy sources, their conversion technology. 					
Course Outcomes:-					
<ul style="list-style-type: none"> Students will get an idea about the availability of Non- conventional energy sources, their conversion technologies, utilization, etc. 					
UNIT – I		Lecture Hrs:9			
<p>Solar Energy Sun as Source of Energy, Availability of Solar Energy, Nature of Solar Energy, Solar Energy & Environment. Various Methods of using solar energy–Photo thermal, Photovoltaic, Photosynthesis, Present & Future Scope of Solar energy. Hybrid wind energy systems - wind + diesel power, wind + conventional grid, wind +Photovoltaic system etc.</p>					
UNIT – II		Lecture Hrs:9			
<p>Biomass: Generation and utilization, Properties of biomass, Agriculture Crop & Forestry residues used as fuels. Biochemical and Thermo –chemical Conversion, Combustion, Gasification, Biomass gasifies and types etc. Applications of Gasifies to thermal power and Engines, Biomass as a decentralized power generation source for villages Concept of Bio-energy: Photosynthesis process, Bio-fuels, Biomass resources Bio based chemicals and materials Thermo-chemical Conversion: Pyrolysis, Combustion, Gasification, and Liquefaction. Bio-Chemical Conversion: Aerobic and An aerobic conversion, Fermentation etc. Bio-fuels: Importance, Production and applications. Bio-fuels: Types of Bio-fuels, Production processes and technologies, Bio fuel applications, Ethanol as a fuel for I.C. engines, Relevance with Indian Economy. Bio-based Chemicals and Materials: Commercial and Industrial Products, Biomass, Feed stocks, Chemicals, Plastics, Fibers etc.</p>					
UNIT – III		Lecture Hrs:9			
<p>Bio methanation: Importance of biogas technology, Different Types of Biogas Plants. Aerobic and an aerobic bio conversion processes various substrates used to produce Biogas (cow dung, human and other agricultural waste, municipal waste etc.) Individual and community biogas operated engines and their use. Removal of CO₂ and H₂O, Application of Biogas in domestic, industry and vehicles. Bio-hydrogen production. Isolation of methane from Biogas and packing and its utilization.</p>					
UNIT – IV		Lecture Hrs:9			
<p>Wind Energy: Basics & Power Analysis, Wind resource assessment, Power Conversion Technologies and applications, Wind Power estimation techniques, Principles of Aerodynamics of wind turbine blade, Various aspects of wind turbine design,</p>					
UNIT – V		Lecture Hrs:9			
<p>Wind Turbine Generators: Induction, Synchronous machine, constant V&F and variable V & F generations, Reactive power compensation. Site Selection, Concept of wind form & project cycle, Cost economics & viability of wind farm,</p>					
Textbooks:					
<p>Biomass Renewable Energy–D.O.halland R.P.Overeed (John Wiley and Sons, Newyork,1987) Biomass for energy in the developing countries–D.O.Hall ,G.W. barnard and P.A.Moss(Pergamon Press Ltd.1982)</p>

Course Code	SIMULATION LABORATORY	L	T	P	C
23HPC8807		0	0	4	2
Semester		II			
Course Objectives: Student will be able					
<ul style="list-style-type: none"> • To identify the behavior of analytical models introduced in lecture to the actual behavior of real fluid flows. • To explain the standard measurement techniques of fluid mechanics and their applications. • To illustrate the students with the components and working principles of the Hydraulic machines- different types of Turbines, Pumps, and other miscellaneous hydraulics machines. • To analyze the laboratory measurements and to document the results in an appropriate format. 					
Course Outcomes:- Student will be able to					
<ul style="list-style-type: none"> • Describe the measurement techniques of fluid mechanics and its appropriate application. • Interpret the results obtained in the laboratory for various experiments. • Compare the results of analytical models introduced in lecture to the actual behavior of real fluid flows and draw correct and sustainable conclusions. • Write a technical laboratory 					
List of Experiments :-					
<ol style="list-style-type: none"> 1. Jet impact on flat and curved surfaces 2. Measurement of drag on a circular cylinder in high Reynolds number flow 3. Energy loss measurements in subcritical and supercritical open channel flow 4. Measurement of fluid viscosity 5. Determination of friction factor as a function of Reynolds number in pipe flow 6. Studying laminar-turbulent transition for flow in a tube 7. Boundary layer flow over a flat plate 8. Pressure distribution around a circular cylinder in high Reynolds number flow 9. Measurements using Forced Vortex Apparatus and Free Vortex Apparatus 10. Measure the losses in piping System 11. Measure Friction loss along a pipe 12. Pulsating flow setup 13. Flow Measuring Apparatus, (H10 Setup) 14. Flow through an Orifice (H4 Setup) 15. Water Flow Channel (H17 Setup)

Course Code	COMPUTATIONALFLUIDDYNAMICS LABORATORY	L	T	P	C
23HPC8808		0	0	4	2
Semester		I			
Course Objectives: Student will be able to					
<ul style="list-style-type: none"> • Develop finite difference and finite volume discretized forms of the CFD equations. • Formulate explicit & implicit algorithms for solving the Euler Eqns & Navier Stokes Eqns 					
Course Outcomes:- Student will be able to					
<ul style="list-style-type: none"> • At the end of the course student will be able to formulate explicit & implicit algorithm for solving the Euler Eqns & Navier Stokes Eqns. 					
List of Experiments :-					
<ol style="list-style-type: none"> 1. Simulation of Plane Poiseuille flow through long Parallel and Stationary Plates and Plotting Velocity Contours and Velocity Variation along the horizontal central line .Take the distance between the plates as 4 cm. Properties of fluid are $\nu=0.000217\text{m}^2/\text{s}$, $\rho=800\text{kg}/\text{m}^3$ 2. Simulation of Couette flow when the upper plates are moving with a velocity of 40m/s. Take the distance between the plates as 4 cm properties of fluid are $\nu=0.000217\text{m}^2/\text{s}$, $\rho=800\text{ kg}/\text{m}^3$. Make simulations for a pressure gradient of 0-30000 $\text{N}/\text{m}^2/\text{m}$ and 20000Nm^2/m and report the variation of velocity contours for each case. 3. Simulation of a channel flow (Tube flow) for a tube of diameter. 5 cm and take the fluid as water at 30°C at the entry of the tube of length 0.7m. A heat flux of 3000W/m^2 is imposed along a wall. Obtain the contours of velocity and temperature along the length of the tube and also obtain the centre line temperature and velocity of fluid. 4. Simulation of a channel flow (Tube flow) for a tube of diameter 5 cm and take the fluid as water at 30°C at the entry of the tube length 0.7m .A Constant wall temperature of 300°C is imposed along the wall. Obtain the contours of Velocity and temperature along the length of the tube and also obtain the centre line temperature and velocity of fluid. 5. Unsteady simulation of compressible flow of air through 2D convergent–Divergent nozzle, with inlet and outlet of 0.2m size and both are joined by a throat section where the flow area is reduced by 10% and is of sinusoidal shape. Air enters the nozzle at a pressure of 0.9 bar and leaves at 0.73 bar. Obtain the contours of velocity, pressure and Mach number. 6. Simulation of flow over a circular cylinder of size 5cm for different Reynold's number value so far and plotting the contours of velocity and vorticity 7. Simulation of temperature contours for a square plate of size 0.2m subjected to different types of boundary conditions. 8. Simulation of temperature contours for a pin fin in natural and forced convective conditions

Course Code	ENGLISH FOR RESEARCH PAPER WRITING	L	T	P	C
23HAC001		2	0	0	0
Semester		I			
Course Objectives: This course will enable students:					
<ul style="list-style-type: none"> • Understand the essentials of writing skills and their level of readability • Learn about what to write in each section • Ensure qualitative presentation with linguistic accuracy 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Understand the significance of writing skills and the level of readability • Analyze and write title, abstract, different sections in research paper • Develop the skills needed while writing a research paper 					
UNIT - I		Lecture Hrs:10			
1 Overview of a Research Paper- Planning and Preparation- Word Order- Useful Phrases - Breaking up Long Sentences-Structuring Paragraphs and Sentences-Being Concise and Removing Redundancy -Avoiding Ambiguity					
UNIT - II		Lecture Hrs:10			
Essential Components of a Research Paper- Abstracts- Building Hypothesis-Research Problem - Highlight Findings- Hedging and Criticizing, Paraphrasing and Plagiarism, Cauterization					
UNIT - III		Lecture Hrs:10			
Introducing Review of the Literature – Methodology - Analysis of the Data-Findings - Discussion- Conclusions-Recommendations.					
UNIT - IV		Lecture Hrs:9			
Key skills needed for writing a Title, Abstract, and Introduction					
UNIT - V		Lecture Hrs:9			
Appropriate language to formulate Methodology, incorporate Results, put forth Arguments and draw Conclusions					
Suggested Reading

Course Code	DISASTER MANAGEMENT	L	T	P	C
23HAC002			2	0	0
Semester		I			
Course Objectives: This course will enable students:					
<ul style="list-style-type: none"> • Learn to demonstrate critical understanding of key concepts in disaster risk reduction and humanitarian response. • Critically evaluate disaster risk reduction and humanitarian response policy and practice from Multiple perspectives. • Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations • Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in 					
UNIT - I					
<p>Introduction: Disaster: Definition, Factors and Significance; Difference Between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude. Disaster Prone Areas in India: Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post- Disaster Diseases and Epidemics</p>					
UNIT - II					
<p>Repercussions of Disasters and Hazards: Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.</p>					
UNIT - III					
<p>Disaster Preparedness and Management: Preparedness: Monitoring of Phenomena Triggering A Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness.</p>					
UNIT - IV					
<p>Risk Assessment Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival.</p>					
UNIT - V					
<p>Disaster Mitigation: Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.</p>					
Suggested Reading

Semester		I			
Course Objectives: This course will enable students:					
<ul style="list-style-type: none"> • To get a working knowledge in illustrious Sanskrit, the scientific language in the world • Learning of Sanskrit to improve brain functioning • LearningofSanskrittodevelopthelogicinmathematics,science&othersubjects enhancing the memory power • The engineering scholars equipped with Sanskrit will be able to explore the huge • Knowledge from ancient literature 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Understanding basic Sanskrit language • Ancient Sanskrit literature about science &technology can be understood • Being a logical language will help to develop logic in students 					
UNIT - I					
Alphabets in Sanskrit,					
UNIT - II					
Past/Present/Future Tense, Simple Sentences					
UNIT - III					
Order, Introduction of roots					
UNIT - IV					
Technical information about Sanskrit Literature					
UNIT - V					
Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics					
Suggested Reading

Course Code	PEDAGOGY STUDIES	L	T	P	C
23HAC004		2	0	0	0
Semester		II			
Course Objectives: This course will enable students:					
<ul style="list-style-type: none"> • Review existing evidence on the review topic to inform programme design and policy making undertaken by the Df ID, other agencies and researchers. • Identify critical evidence gaps to guide the development. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Students will be able to understand: • What pedagogical practices are being used by teachers in formal and informal classrooms in developing countries? • What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners? • How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? 					
UNIT - I					
Introduction and Methodology: Aims and rationale, Policy back ground, Conceptual frame work and terminology Theories of learning, Curriculum, Teacher education. Conceptual framework, Research questions. Overview of methodology and Searching.					
UNIT - II					
Thematic overview: Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries. Curriculum, Teacher education.					
UNIT - III					
Evidence on the effectiveness of pedagogical practices, Methodology for the in depth stage: quality assessment of included studies. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? Theory of change. Strength and nature of the body of evidence for effective pedagogical practices. Pedagogic theory and pedagogical approaches. Teacher's attitudes and beliefs and Pedagogic strategies.					
UNIT - IV					
Professional development: alignment with classroom practices and follow-up support, Peer support, Support from the head teacher and the community. Curriculum and assessment, Barriers to learning: limited resources and large class sizes					
UNIT - V					
Research gaps and future directions: Research design, Contexts, Pedagogy, Teacher education, Curriculum and assessment, Dissemination and research impact.
